

A Little Extra Love, Just in Case

Guest post by John A. Taylor.

It seems a pity that the human body cannot proclaim its emotional illness or health by raising or lowering its temperature. Even a minor cold is reflected by an increase of one's temperature and, no matter how insignificant the illness, a fever will bring forth care and sympathy. But not so with an emotional upset. Here, more often than not, all but the most major difficulties are ignored.
